

Dear patients,  
dear ladies and gentlemen,

coming back from the international laser congress - Laserbucharest 2010 - Military Technical Academy, Program Chairperson: Prof. Dan G. Siposan, I want to give you some informations regarding the actual developments of low level lasertherapy.

For you, our patients, the most interesting news will be that the biological effectiveness of the highdosage low level lasertherapy by Dr. Wilden® is now confirmed by animal experiments.

Dr. Chung-Ku Rhee of the Dankook University, College of Medicine, Department of Otolaryngology, Medical Laser Research Center, Cheonan, Südkorea, was demonstrating that balance cells of rats which were damaged by the ototoxic antibioticum Gentamycin can regenerate completely by being treated with 10 sessions of high dosages of low level laserlight.

With a second experiment Dr. Chung-Ku Rhee demonstrated that hearing cells of guinea pigs which were damaged by noise are in the same way regenerating themselves by a therapy with 10 sessions of high dosages of low level laserlight.

Beside this Dr. Rhee was able to demonstrate a prophylactic effectiveness of low level laserlight on the inner ear organ. The results are documented by clinical tests and electro microscopic pictures.

This results are confirming our 20 years long existing therapeutical work with high dosage low level laserlight on exhausted inner ear organs. This means for you that you received an absolutely true therapy.

This is also valid if you maybe are after a highdosage Low Level Lasertherapy by Dr. Wilden® still suffering from uncomfortable symptoms in your hearing and balance organs. The reason for this is in this cases always (!) the individual level of inner ear exhaustion at the beginning of the therapy and that a regenerating inner ear organ of course is also during the regeneration process a still working organ.

Out of this reasons is coming in several cases the necessity to continue the therapy by following up therapies or by a long time home therapy of high quality with our home therapy laser devices. This is also a absolutely logical necessity if patients with strong inner ear exhaustions want to have the most possible positive biological effect for their ears. All lumomed therapists are informing every patient before and during every therapy about this connections.

Beside the biological correctness of the highdosage Low Level Lasertherapy by Dr. Wilden® in our lumomed offices an economically correctness is existing since 20 years. This means every patient received and receives the most true balance of payments because in the field of inner ear therapy with laserlight you receive in our offices and with our home laser devices the world wide highest standard of light and therapy quality.

Please understand this remark because we experiment that our therapy quality is copied by seeming more cheap copy therapies and because we all experient in the moment propaganda compaigns of the hearing aids companies and the connected medical professions and institutions all around the world. Such a strong and constantly growing medical propaganda is in the history of medicin until now unique.

If you have questions please contact us.

All lumomed therapists are very happy to be able to inform you about this

issue and we wish you all the best.

Sincerely

Dr. med. Lutz Wilden
